BUSINESS QUESTION

Where should an SAT-prep startup spend to grow, and what converts free users to paid?

APPROACH

Cleaned 151 free-text channel labels into 7; SQL cohort / funnel / conversion analysis. 5,500 students (synthetic dataset calibrated to real production distributions).

KEY FINDINGS

- Volume ≠ value: the biggest channel converts 5.4% vs 33% for the best channel.
- Conversion more than triples (8% → 27%) with engagement depth.
- Paying students are ~2× as engaged (4.5 vs 2.4 active days).

RECOMMENDATIONS

- Rebalance acquisition spend toward high-efficiency channels; judge channels on paid users.
- Make week-1 activation the north-star metric: it lifts conversion across every channel.
- Tier CAC targets by channel quality, not raw signups.

Synthetic dataset modeled on a real production schema (confidential). Full case study & code: jknguyen-portfolio.vercel.app/projects/lumist-growth · github.com/ndkn-code/lumist-growth-analytics
