Retail / customer analytics (real public data) · SQL · Python · Tableau

BUSINESS QUESTION

Who are the most valuable customers, do they come back, and where does revenue come from?

APPROACH

Cleaned 1.07M rows of real UK online-retail data (UCI Online Retail II) and ran SQL RFM segmentation, cohort retention, and revenue concentration. £19.6M revenue / 5,852 customers / 43 countries.

KEY FINDINGS

- Champions are 25% of customers but 69% of revenue; Loyal add another 14%.
- 72% of customers re-purchase; strong cohorts still buy at ~37% a year later.
- Revenue is concentrated: ~23% of customers = 80%, and the UK alone is 85.5%.

RECOMMENDATIONS

- Protect Champions with a VIP / loyalty track — they carry ~70% of revenue.
- Reactivate At-Risk / Hibernating buyers; cheaper than cold acquisition.
- Diversify beyond the UK using the 42 countries already transacting.

Synthetic dataset modeled on a real production schema (confidential). Full case study & code: jknguyen-portfolio.vercel.app/projects/online-retail · github.com/ndkn-code/online-retail-analytics
