BUSINESS QUESTION

Where is accounts-payable spend going, and which vendors need cleaning up?

APPROACH

Wrote advanced SQL (CTEs, window functions, INTERSECT) over a two-entity ERP AP ledger, validated in pandas. \$7.2B spend / 3,552 vendors / 90K lines (synthetic, modeled on a real Unit4/Coda schema).

KEY FINDINGS

- Spend is steeply Pareto: top 10 vendors = 38%, top 1% (29 vendors) = 61% of \$7.2B AP.
- Vendor master data needs cleanup: 561 never-paid, 207 foreign-address, 118 cross-entity open/closed, 52 near-dup pairs.
- 17% of invoices pay past the 45-day SLA (mean lag ~29 days) — about \$1.2B paid late.

RECOMMENDATIONS

- Run a quarterly vendor-master cleanup: deactivate never-paid, merge duplicates, close cross-entity gaps.
- Focus sourcing on the ~82 vendors that make up 80% of spend.
- Add duplicate-vendor detection + a payment-timing SLA dashboard to cut late and double payments.

Synthetic dataset modeled on a real production schema (confidential). Full case study & code: jknguyen-portfolio.vercel.app/projects/vendor-ap-analytics · github.com/ndkn-code/vendor-ap-analytics
